# Accessible Vehicles

## Road to Freedom & Independence

### Information

- Will the patient be a driver or passenger?
- Will they remain in their chair or transfer?
- What type of mobility device will they be using?
- What type of vehicle do they currently have?
- What is the nature of the disability; is it progressive, stable or improving?
- How will the vehicle be used; for short trips, primary vehicle or for long excursions?

### Funding

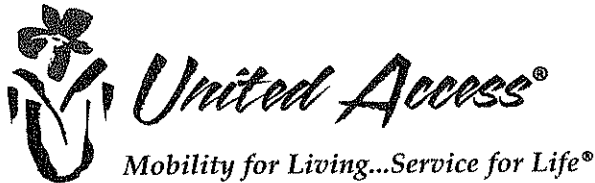

- Is the patient a veteran or do they plan to return to work?
- Is the patient under 21 and receiving Medicaid?
- Other options may be available and we will try our best to find them, including extended term financing up to ten years.

### New Drivers

Driving with hand controls requires an evaluation from an independent driver evaluator, usually an OT. They assess the patient and their capabilities and recommend the equipment that best suits the individual's capabilities.

**United Access carries new and used equipment to meet every budget need.**
